

## The New 465 Area Code is Coming to the 347/718/917/929 Area Code Region in New York

FOR IMMEDIATE RELEASE

**New York Metro, NY** (June 5, 2026) - With new telephone numbers in high demand, the New York Department of Public Service approved the implementation of the new 465 area code to overlay the existing 347/718/917/929 area code region. The 465 area code will serve the boroughs of the Bronx, Brooklyn, Queens, Staten Island as well as the Marble Hill section of Manhattan.

Starting on **June 18, 2026**, customers in the 347/718/917/929 area code overlay region may be assigned a number in the new 465 area code when they request new service or an additional line, but only after the 347/718/917/929 area codes are exhausted. The 465 area code will co-exist everywhere in this region with the 347/718/917/929 area codes. Customers receiving a 465 area code will be required to dial 11 digits (1 + area code + phone number) for all local calls, just as customers with telephone numbers from the 347/718/917/929 area codes do today. Because dialing 11 digits is already established in this region, the eventual addition of the new 465 area code will not require any changes to the way telephone calls are dialed, aside from using the new area code when necessary.

Key facts about the 347/718/917/929/465 area code overlay:

- Telephone numbers, including the current area code, will not change.
- Telephone numbers with the new 465 area code will only be assigned for new services after the existing 347/718/917/929 area codes are exhausted.
- The price of a call, coverage area, or other rates and services will not change due to the overlay.
- What is considered a local call now will remain a local call.
- Customers will continue to dial 1+10 digits for local calls within and between the overlay area codes and 1+10 digits for long distance calls.
- Customers can still dial just three digits to reach 911 and 988, as well as 211, 311, 411, 511, 611, 711, and 811 if those are currently available in their community.

Customers should ensure that all services, automatic dialing equipment, or other types of equipment recognize the new 465 area code as a valid area code and should continue to store or program telephone numbers as 11-digit numbers.
